Attn: Mr. Keith Rowley

Project: 2 standalone 7 kw = 14 kw Solar Photovoltaic Capacity at Our Home  
Subject: Letter of appreciation for a project well done

Dear Keith,

First I want to express my appreciation to you for designing a solar photovoltaic system for us. You used with what I feel and with in depth research has shown to consist of top quality components and they all have good long lasting best in the industry warrants. I further want to thank you for taking the time to understand the necessity to design the site specific solar systems for us with all the necessary idiosyncrasies that we required. The solar systems you designed are quality systems NOT a cookie cutter, mess production, run of the mill systems. Second I want to thank the installation Foreman and crew for doing what I feel is an exemplary installation. Being in a different but somewhat related systems installation business myself for 30+ years, I am not the easiest person to work for because I generally know what I am looking at. The Foreman and I had a couple minor bumps in the very beginning which I really expected and they were expediently corrected to our satisfaction. The end results are superior components, with a quality installation, that looks great, is safe to be around, and works properly per design.

I would recommend SES&S to anyone considering a solar photovoltaic system design/installation.

I look forward to expanding the solar photovoltaic system with another 7 kw panel array and inverter in a couple years and shall be contacting SES&S to provide us with pricing for another of their quality systems.

Sincerely

Charles Barney (Chuck)
